Understanding the planning phase components

Defining tasks and milestones

Review: Beginning the planning phase

Course 3 overview

Hello! Welcome to the third of the six courses in the Google Project Management Certificate program.

This course will explore how to map out a project in the second phase of the project life cycle: the project planning phase. You will examine the key components of a project plan, how to make accurate time estimates, and how to set milestones. Next, you will learn how to build and manage a budget and how the procurement processes work. Then, you will discover tools that can help you identify and manage different types of risk and how to use a risk management plan to communicate and resolve risks. Finally, you will explore how to draft and manage a communication plan and how to organize project documentation. Current Google project managers will continue to instruct and provide you with hands-on approaches for accomplishing these tasks while showing you the best project management tools and resources for the job.

In this reading, you will learn about the Project Management Certificate program structure and course functionality. If you already read this in the last course and don't need a refresher, feel free to skip it. If you're new to the program, welcome! We've specifically designed the program you're about to explore to help every type of learner successfully finish the certificate and get ready for a role in project management. No previous experience is required.

Become job-ready

In this Google Project Management Certificate program, you will learn the foundations of traditional project management and gain insight into Agile project management. According to the Project Management Institute, the project management labor force in seven project-oriented sectors is expected to grow by 33 percent, or nearly 22 million new jobs, by 2027.* We are excited to join you on this journey as you learn the skills to begin a career in one of today's most in-demand professions.

Course 3 covers five weeks of material. Each week includes a series of lessons with many types of learning opportunities, such as:

- **Videos** with a Google employee as your instructor.
- **Readings** to introduce new ideas and case studies and to build on the concepts from the videos.
- **Discussion forums** to explore course topics for better understanding and chat with peers in the program.
- **In-video questions** that will pop up from time to time. They're designed for you to check your learning as you go!
- **Practice quizzes** to check your understanding and give you valuable feedback. **Practice activities** will provide you with a hands-on opportunity to apply skills you are working to master. You will assess your work by answering quiz questions about it or by comparing it to an exemplar built by our course team. *Note: these will not count towards your final course grade, but you are strongly encouraged to complete them as they will help prepare you for the graded quizzes and peer reviews.*
- **Graded quizzes** on video and reading content to measure your progress.
- Ungraded **peer-review activities** on video and reading content that provide you the opportunity to practice applying skills you are working to master. Other learners in your course will see the work you submit and give you feedback based on a rubric.

Everyone learns differently, so we designed this program to let you work at your own pace. Although your personalized deadlines start when you enroll, they're just a guide. Feel free to move through the program however it works best for you. Keep in mind, you can always reset your deadlines by clicking the blue **reset my deadlines** button. There's no penalty for late assignments. To earn your certificate, all you have to do is complete all of the work.

Tips

- We strongly recommend you take all six courses—and complete the items in each lesson—in the order they appear, as new information and concepts build on previous ones.
- Make the most of the readings and additional resources throughout the program. They're designed to support your learning.
- If something is confusing, don't hesitate to rewatch a video, go through a reading again, or ask your classmates for advice in the discussion forum.
- Take part in all learning opportunities to gain as much knowledge and experience possible.

Congratulations on choosing to take this first step toward becoming a part of the wonderful world of project management. Enjoy the journey!
