	This should not be selected Project managers should trust the expertise of the members of their team. Accordingly, project managers can discuss what they already know or believe to be true about components of the project based on their areas of expertise. Project managers should also plan for risks and challenges, assess external constraints, and calculate float in the schedule.	
	Plan for risks and challenges.	
	Correct When project managers consider the risks that may occur, they may be able to find solutions for them in advance. Project managers should review past projects and examine the challenges they faced. Then they should evaluate if similar challenges could occur in this project and prepare accordingly.	
	Assess external constraints.	
	 Correct Leaving extra time in the schedule for external events such as vacations and holidays can help minimize the impact to the project. 	
	Calculate float in the schedule.	

Project managers should determine the amount of float certain tasks have to help them figure out where they can change the order of tasks or juggle resources if needed.
