Agile or Waterfall?

Earlier in this lesson, we compared the Agile approach to the Waterfall methodology. Recall the following differences between the two and the way each one deals with a project plan's requirements, documentation, and deliverables.

Compare Agile to Waterfall	Agile	Waterfall
Requirements	Follow informal process to changes in requirements; frequent	Follow formal approval process to initiate requirement changes; infrequent
Documentation	Use more in-person communication than documentation	Use many types of documentation
Deliverables	Release deliverable in stages	Release deliverable at end as a major event

Now, describe a personal or professional project. In which parts of the project did you follow the Agile approach and in which parts did you follow the Waterfall methodology?

Please include 5-10 sentences in your written response. Then, visit the discussion forums⤴ to check out what others shared, and choose two or more posts to comment on and discuss.
